How does Auto-Guard Work

- It becomes a part of the parking structure
- It is liquid-applied to form seamless protective barrier
- Approved aggregate embedded in the coating creates a durable skid - resistant surface
- Optimum tensile strength and elongation properties allow it to expand and contract with freeze / thaw conditions while bridging hairline cracks up to 1/16"

Peda-Gard Systems Pedestrian Traffic - Bearing Waterproofing System

Prevent leaks and protect your concrete walking surfaces with an attractive, seamless application of Peda-Gard. Available in a wide range of colors, textures, and formulations, Peda-Gard has performed in every climate for over 40 years.

How does Peda-Guard Work

- It is liquid-applied to form a seamless protective barrier
- Approved aggregate embedded in the coating creates a durable skid-resistant surface
- Optimum tensile strength and elongation properties allow it to expand and contract with freeze thaw conditions while bridging hairline cracks up to 1/16"
- It becomes a part of the pedestrian traffic structure
- System is sustainable for the life of the structure
